## POTATOES

ACREAGE harvested in 1985 totaled 1.36 million acres (551 thousand hectares), up 5 percent from 1984.

YIELD averaged a record 299 cwt per acre, up 20 cwt from 1984.

PRODUCTION totaled a record 407 million cwt (18.5 million metric tons), up 12 percent from last year and 11 percent above the previous record set in 1978.

UTILIZATION shows 192 million cwt processed (nearly 56 percent of sales), 126 million cwt for table stock (36 percent of sales), and 27.8 million cwt sold for seed and livestock feed (8 percent).

VALUE of production at \$1.57 billion was down 23 percent from last year; average price per cwt were down 31 percent.

## POTATOES

### Production and Disposition by States -- 1984 and 1985 Potato Utilization -- 1983, 1984 and 1985

This publication presents estimates of acreage, yield per acre, production, farm disposition, season average price, value and utilization of sales including processing. First of the month estimates (December thru May) of total stocks of potatoes for the 15 major fall States are shown. Production, disposition and value data for Alaska are included separately.

The final 1985 crop estimates are based primarily on information furnished by crop reporters and cooperating State or Federal agencies. This includes annual State farm census data in some States, Market News Service rail and truck shipments and unloads, Federal-State inspections--and miscellaneous data available through various marketing programs.

Price estimates represent average returns to growers for all uses and methods of sale. These prices are applied to production to compute value of production and to the quantity sold to compute value of sales. The difference is accounted for by farm use for seed, feed and home use and shrinkage and loss. The published United States season average price is obtained by weighting State prices by quantities sold.

Potato production, utilization and value of sales in each State has been classified by seasonal group according to the period or periods when the largest supplies are usually harvested.

The four seasonal groups are as follows:

| SEASON | USUAL TIME OF HARVEST    |
|--------|--------------------------|
| Winter | January through March    |
| Spring | April through June       |
| Summer | July through September   |
| Fall   | October through December |

These seasons are not fixed dates but are approximations because there is some overlapping of harvest before or after the specified season. Generally, the marketing season follows closely the harvesting season except for the fall crop where marketing from storage may extend through August of the following year.

## PRODUCTION AND UTILIZATION

Final production of U.S. potatoes in 1985 totaled a record 407 million cwt (18.5 million metric tons), up 12 percent from 1984 and 22 percent above 1983. Harvested area at 1.36 million acres (551 thousand hectares) was 5 percent larger than 1984 and 10 percent above 1983. The average yield jumped to a record 299 cwt per acre, 20 cwt above 1984 and 30 cwt above 1983.

Value of production fell 23 percent to \$1.57 billion and was 19 percent below the 1983 crop. The average price of \$3.92 per cwt fell \$1.77 from 1984 and was \$1.90 below 1983. Sales represented 85 percent of production in 1985. The remaining 15 percent were lost through shrinkage and sorting; or were used on farms where produced for feed, food, or seed.

Total sales covered 346 million cwt of potatoes in the 1985 season, up 6 percent from 1984. Processors bought a record 192 million cwt of potatoes, up 3 percent from 1984. Processor purchases accounted for nearly 56 percent of all sales. Table stocks sales at 126 million cwt gained 11 percent; while the remaining 27.8 million cwt was used for seed and livestock feed and was up 2 percent.

The non-sales category of 60.9 million cwt was up 70 percent from 1984 and nearly doubled 1983. Heavy frost damage in Western States and record production pushed sorting losses and shrink to 52.8 million cwt, up 75 percent from last year and 114 percent above 1983. More potatoes were also held on farms where grown for seed and livestock feed.

Frozen french fries were the major processed item, using 94.7 million cwt of raw potatoes, a gain of 8 percent from 1984. Chips and shoestring potatoes at 42.3 million cwt held at last year's level. Dehydration at 30.0 million cwt, and starch, etc. at 3.49 million cwt, registered gains of 8 and 3 percent, respectively. Canning and other frozen products used fewer potatoes than last season.
